

FINAL PROJECT REPORT [WEEK 3]

Group Name: JaiJaiSungLui

Group Number: Group 3

Group members: Nathi, Kullatida, Thannapat

Calendar Week: CW42

Date: [Oct 20–26, 2025]

Progress Summary

This week, our team is focusing on **researching and learning coding strategies** for the Auto Robot mission. We studied how to effectively use each electronic component according to its purpose and the mission.

The **Auto Robot V1** was finalized and assembled, excluding the wiring process, which we are waiting for adjustment. Moreover, we started **3D printing specific parts** required for Auto Robot assembly.

In addition, the **Manual Robot design** is completed only for the **drivetrain and hand mechanism (V1)**.

Next Week Plan

- Begin wiring and electronic component placement for the Auto Robot,
- Continue testing and coding for the Auto Robot mission.
- Develop and improve the Manual Robot shooting mechanism.

Problems Encountered

- Wiring and electronic component process required properly planned for the most effective result.
- The shooting mechanism for the Manual Robot required a large amount of time to design which takes a lot of time researching on this mechanism.
