

FINAL PROJECT – Individual Report [Week 3]

Group Name: JaiJaiSungLui

Group Number: Group 3

Name: Nathi Ritnatikul

Calendar Week: CW42

Date: [Oct 20–26, 2025]

Week 3 Progress:

- Finalized the **Auto Robot V1** and fully assembled the frame **excluding the wiring** and other electronic components.
- Prepared for wiring and other electronic components adjustment.
- Began designing the **Manual Robot** by dividing the whole robot into three main parts consisting of drivetrain, hand mechanism, and shooting mechanism.
- Complete **First version** of the **Manual Robot drivetrain** and **hand mechanism**.

Challenges & Solutions:

- **Challenge 1:** To be able to place all the electronic components, we need to wire them properly for the most effective result.
- **Solution:** We will design a way to place all the components together without exceeding the size limit and easy for optimization and maintenance.
- **Challenge 2:** Manual robot is difficult to design due to limited components and require a lot of function for the mission.
- **Solution:** Split the design into different functions according to the mission for better designing, testing, and adjustment.

Next Week Plan:

- Begin wiring and printing other supports for electronic components for the Auto robot.
- Continue designing and adjusting the Manual robot.
- Testing and optimising both robot structures and coding for better results.
